

Grounded Force Feedback Arm with Haptic Glove

Team

Sam Schodel
Minh B. T. Nguyen
Nick Tremaroli
Max Stelmack
Cam Dunning

Team Introduction

**Sam E.
Schoedel**

B.S. in CPE - Control,
Robotics, and
Automation.

**Minh T.
Nguyễn**

B.S./M.S. in CPE -
Machine Learning, CS
minor.

**Nicholas J.
Tremaroli**

B.S./M.S. in CPE -
Software Systems.

**Maxwell A.
Stelmack**

B.S./M.S. in CPE -
Control, Robotics, and
Automation.

**Cameron K.
Dunning**

B.S. in CPE - Machine
Learning

Table of Contents

- 1. Introduction**
- 2. Architecture Design**
- 3. Hardware**
- 4. Software**
- 5. Challenges**
- 6. End-to-end Communication Pipeline**
- 7. Testing**
- 8. Results & Analysis**
- 9. Future Work**

Table of Contents

- 1. Introduction**
 - **Problem Statement**
 - **Requirements**
 - **Engineering Characteristics**
- 2. Architecture Design**
- 3. Hardware**
- 4. Software**
- 5. Challenges**
- 6. End-to-end Communication Pipeline**
- 7. Testing**
- 8. Results & Analysis**
- 9. Future Work**

1. Introduction - Problem Statement

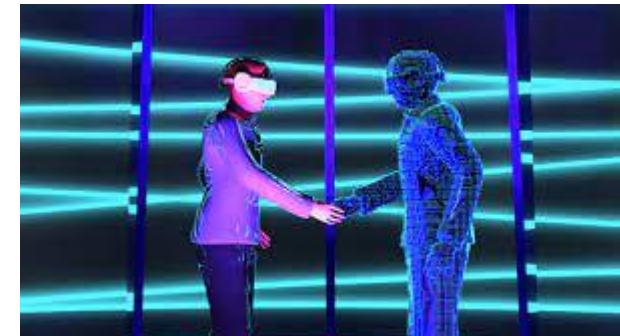

- Customer: Dr. Leonessa, director of the TREC Lab
- Objective: Apply forces on a user's hand while in VR
- Applications: Video games and training simulations

Video Games

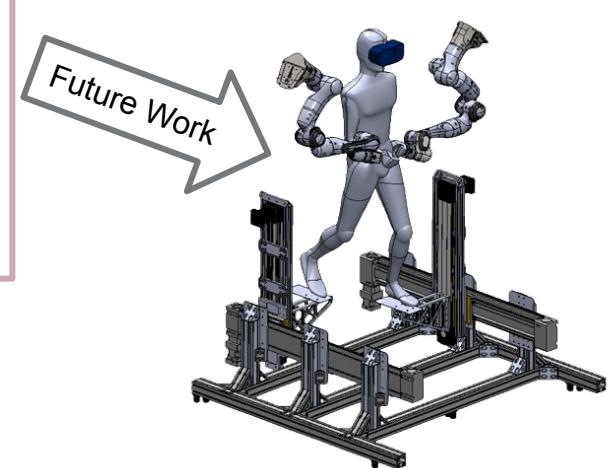

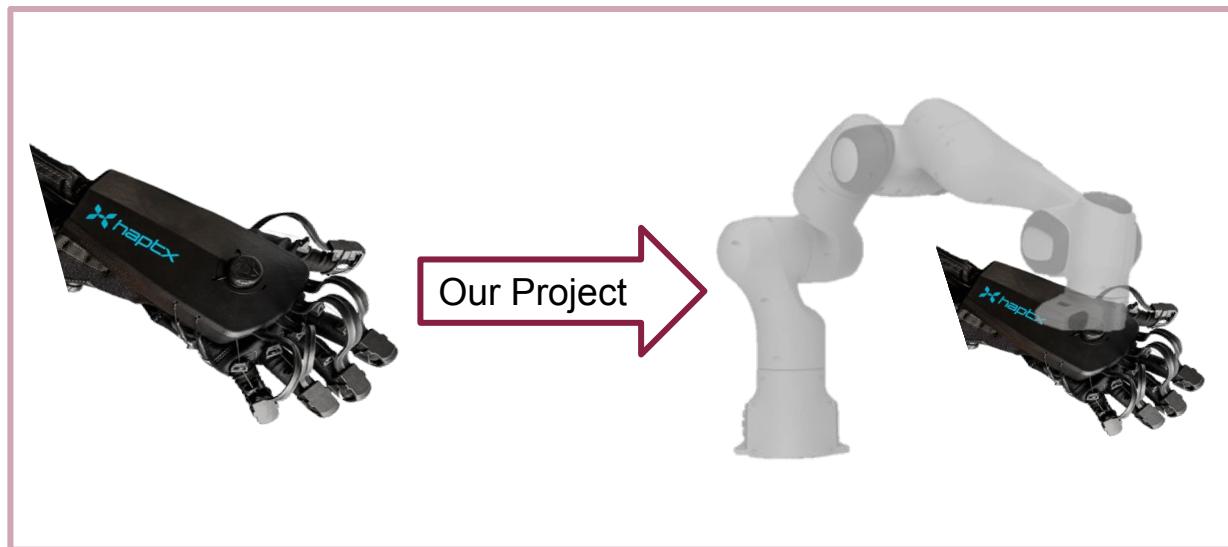

Safety Training

Metaverse

1. Introduction - Requirements

- HaptX gloves for user to interact with virtual world
- Robotic arm to apply forces on hand
- Future integration with TREC Lab's ForceBot

1. Introduction - Engineering Characteristics

Engineering Characteristics		
Customer needs	Customer Need Description	Weighting (1-5)
1	Safety	5
2	Transparency	5
3	Stay Within Budget	4
4	Compatibility with ForceBot	4
5	Accurate Simulation Dynamics	4
6	Range of Motion of the Arms	4
7	Low Power Consumption	3
8	System Physical Comfort	2
9	Visual Appeal of System	1

Table of Contents

1. Introduction
2. Architecture Design
3. Hardware
4. Software
5. Challenges
6. End-to-end Communication Pipeline
7. Testing
8. Results & Analysis
9. Future Work

2. Architecture Design

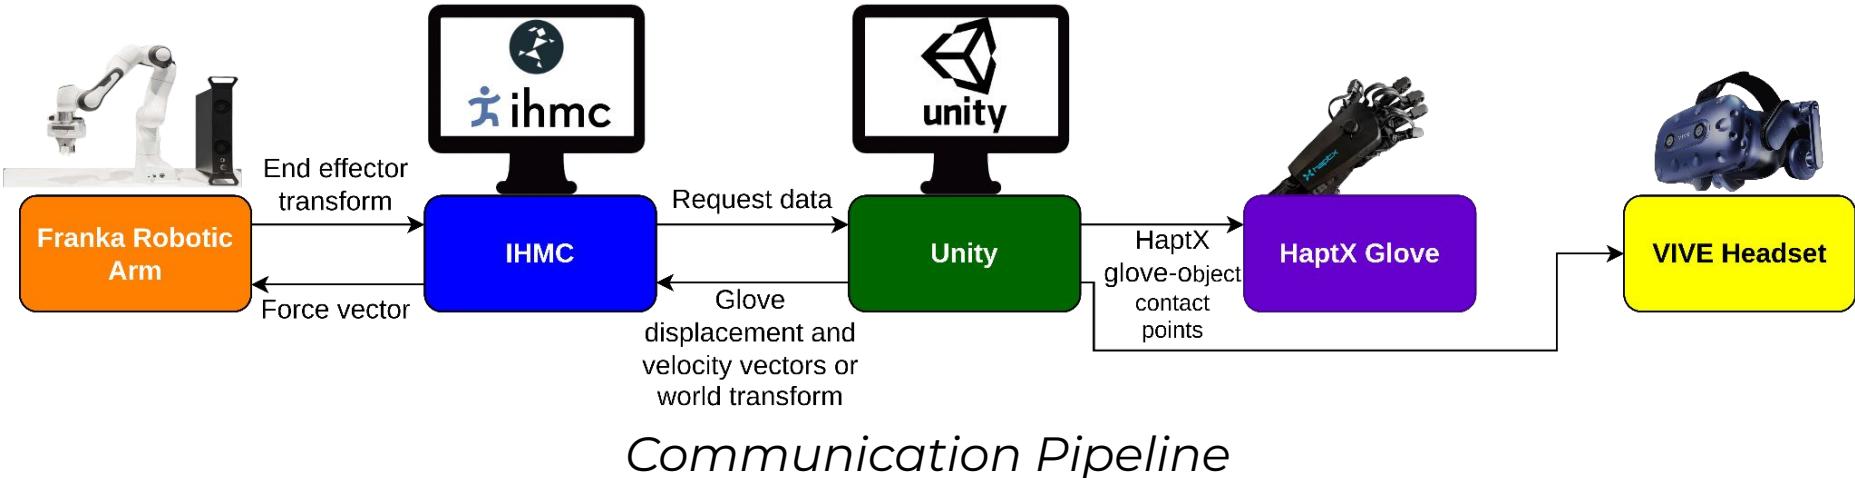

Table of Contents

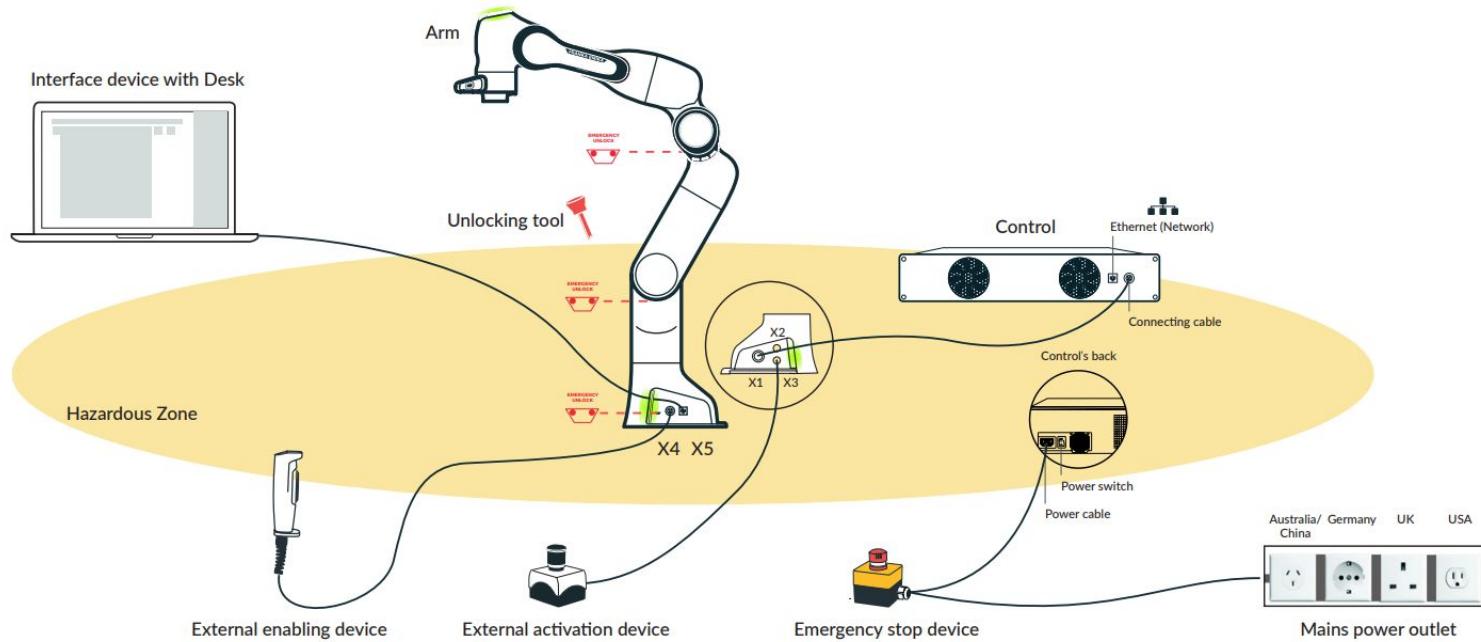

1. Introduction
2. Architecture Design
3. Hardware
 - o Franka Robotic Arm
 - o 3D Printed Mount Design
 - o Other Components
4. Software
5. Challenges
6. End-to-end Communication Pipeline
7. Testing
8. Results & Analysis
9. Future Work

3. Hardware - Franka Robotic Arm

	Panda Arm	KR810	KR1205	DOBOT CR103m
Price (\$)	27,000	28,900	32,111	56,500
Max Payload (kg)	3	10	5	5
Reach (mm)	855	850	1200	1525
Self-weight (kg)	18	23.5	23	74
Force Sensing	All Axes	No torque or force sensing	Six axis force/torque sensor on end effector	N/A
Degree of Freedom	7	7	7	6
Max Speed (m/s)	2	3	3	3
Max Acceleration (m/s^2)	8	8	8	8
Software Interface	C++ Libfranka, ROS	C++ Extension, ROS	C++ Extension, ROS	Lua

3. Hardware - Franka Robotic Arm

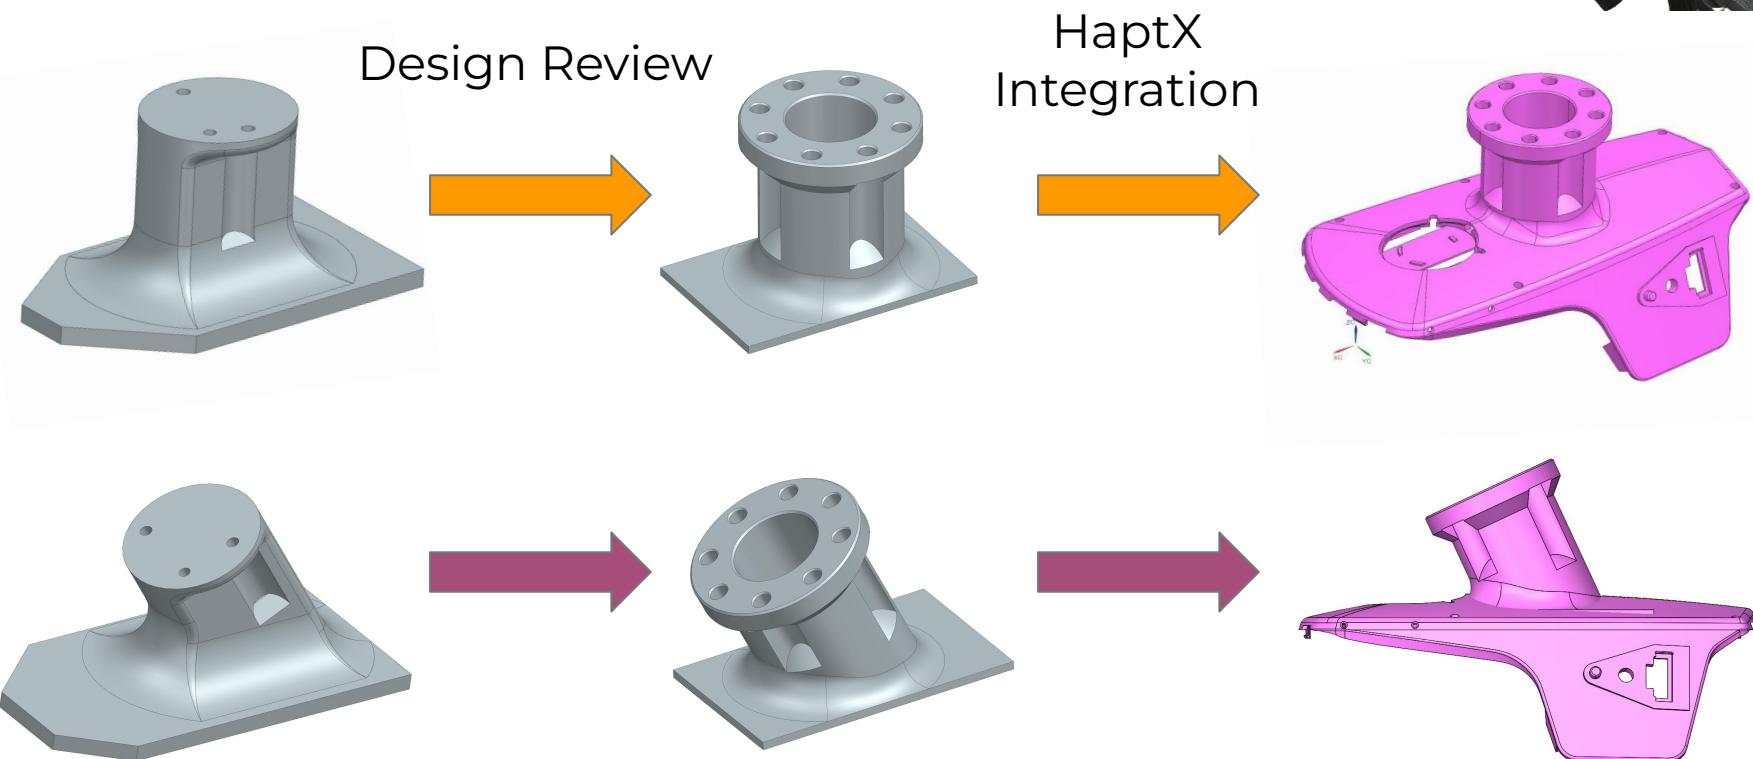

-

Panda Arm	
Max Payload (kg)	3
Reach (mm)	855
Force Sensing	All Axes
Degree of Freedom	7
Max Acceleration (m/s²)	8

3. Hardware - Mount Design

- Worked with HaptX to develop new 3D printed glove backplates

3. Hardware - Other Components

- HaptX Glove

- VIVE Headset

- Base Stations

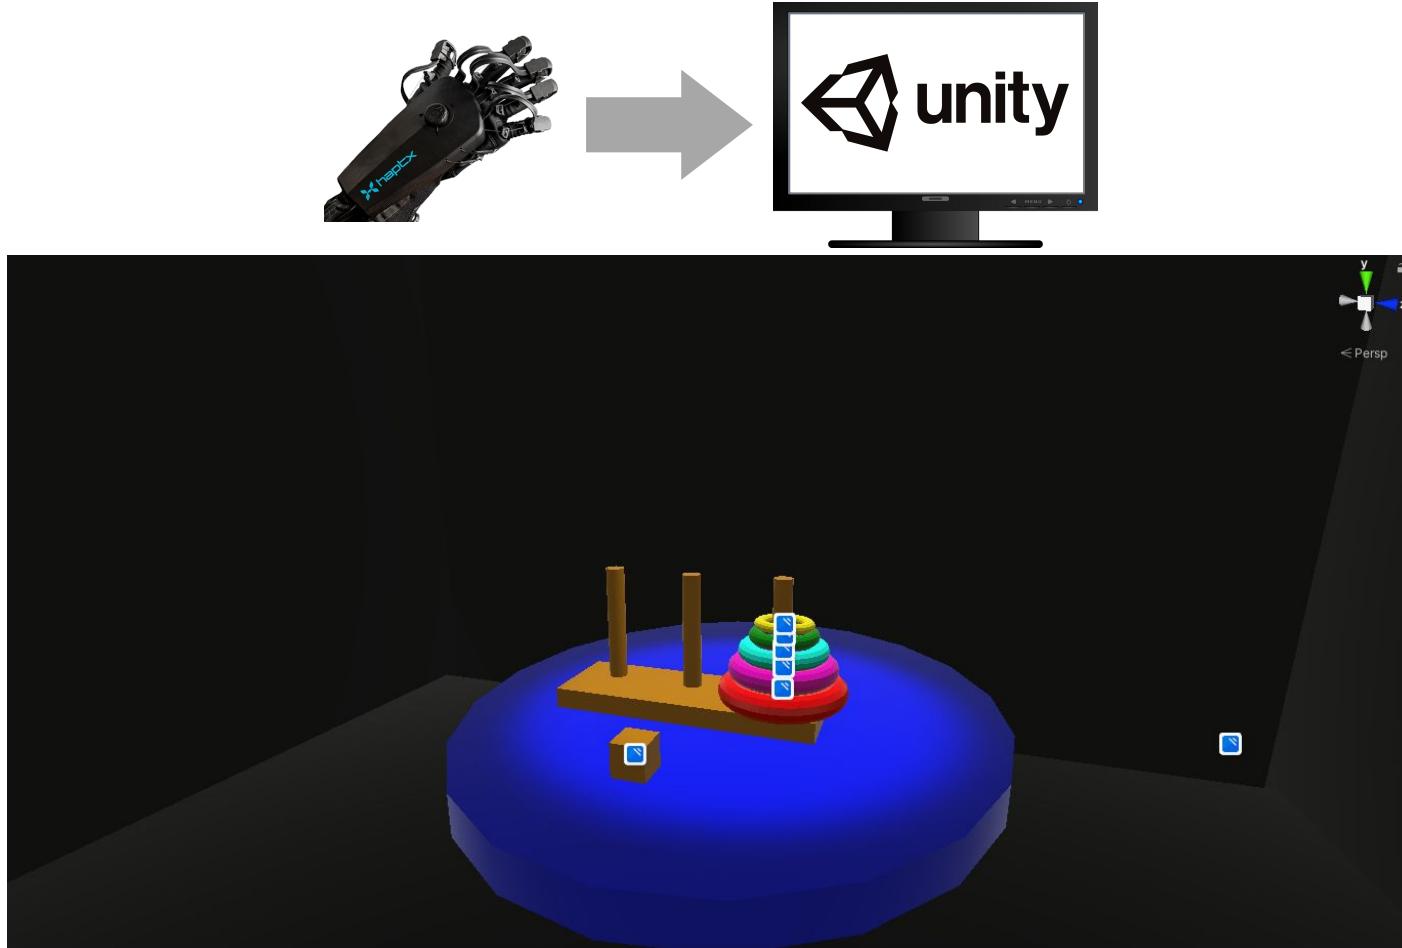

Table of Contents

1. Introduction
2. Architecture Design
3. Hardware
4. Software
 - o Unity
 - o IHMC
 - o ROS Bridge
 - o Real-time Kernel
5. Challenges
6. End-to-end Communication Pipeline
7. Testing
8. Results & Analysis
9. Future Work

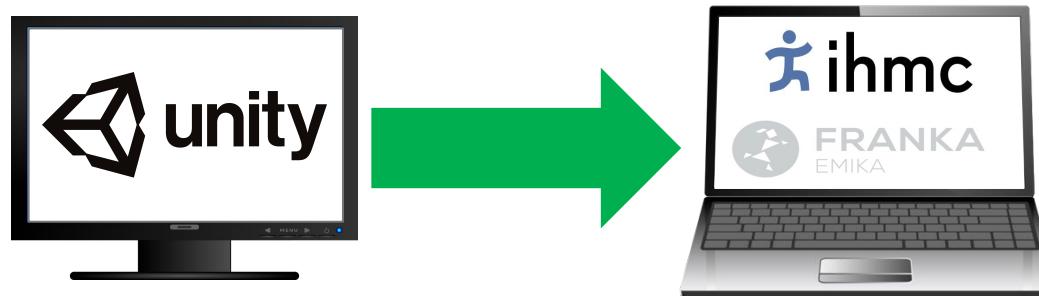

4. Software - Unity

- Interact with environment through VR scenarios
- Extract information from interactions in environment

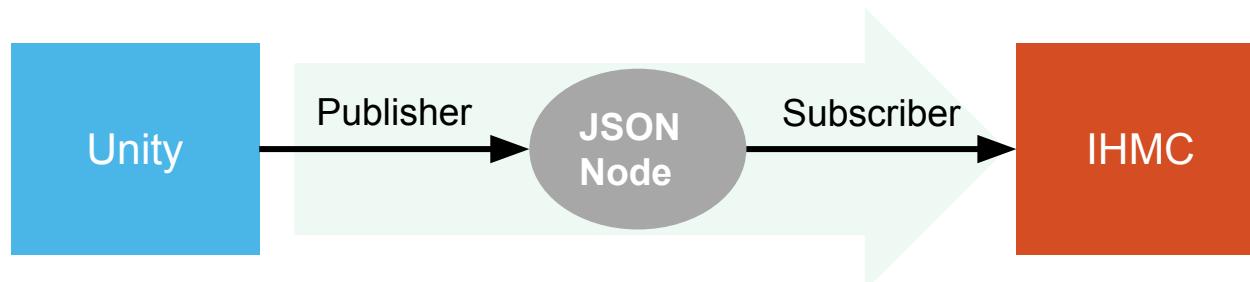

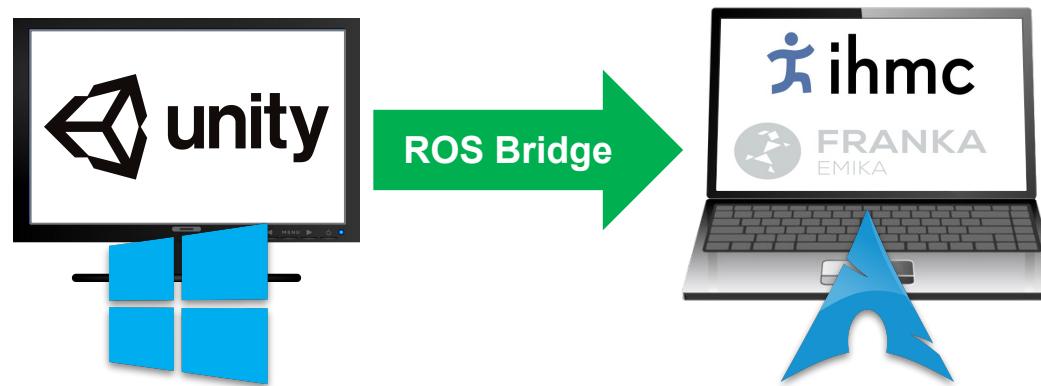

4. Software - IHMC

- Open source software
- Necessary for integration with ForceBot
- Mediator between Unity and arm

4. Software - ROS Bridge

- Unity and IHMC are on separate platforms
- ROS Bridge connects Unity with IHMC
- Configured bridge to send information used to recreate forces

4. Software - Real-time Kernel

- Real-time kernel on Arch Linux
- Local host TCP socket connects IHMC and Libfranka
- Meticulously calculated socket connection timing

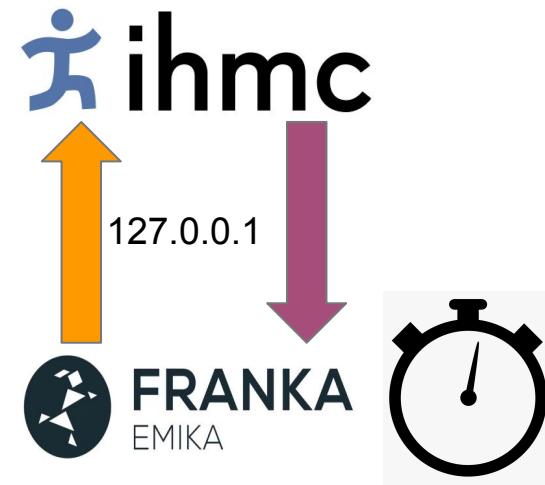

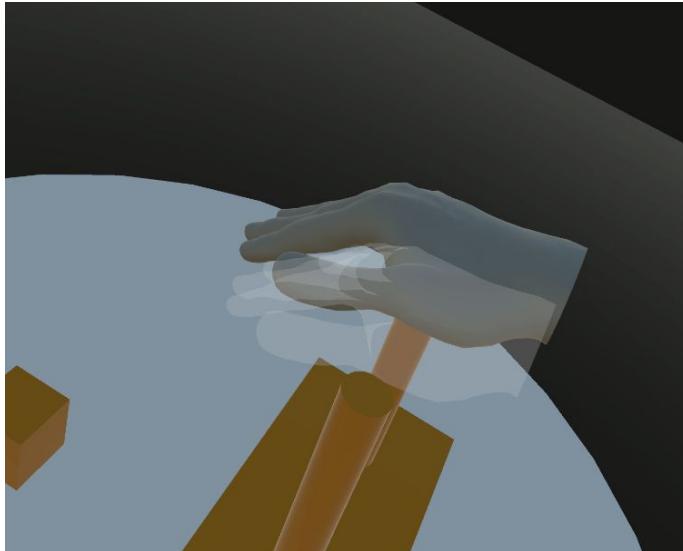

Table of Contents

1. Introduction
2. Architecture Design
3. Hardware
4. Software
5. Challenges
 - Force Extraction
 - Axis Alignment
 - IHMC to Frankalib Delay
 - IHMC to Frankalib Integrity
6. End-to-end Communication Pipeline
7. Testing
8. Results & Analysis
9. Future Work

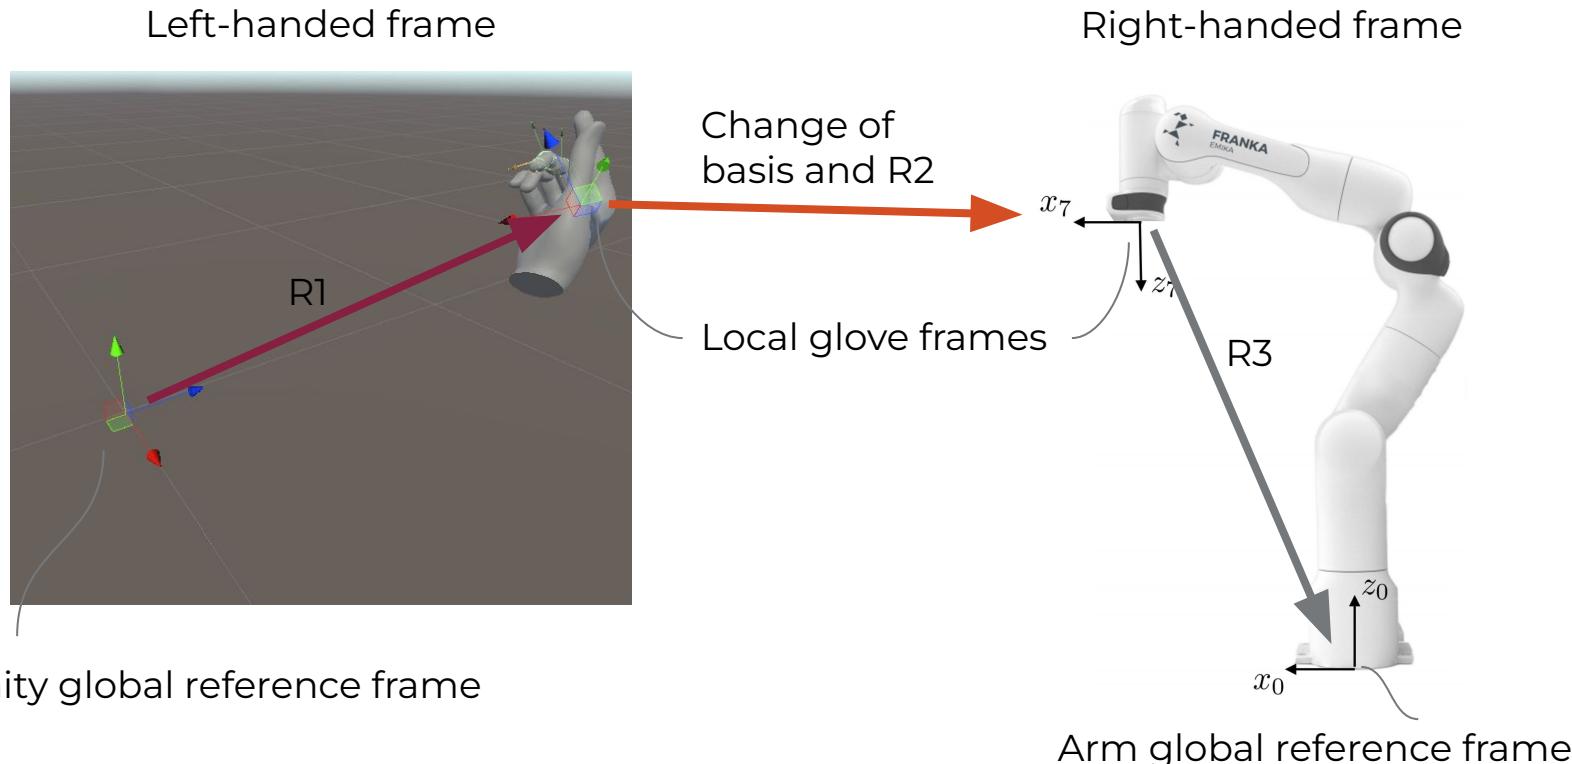

5. Challenges - Force Extraction

- Initial attempts used only object mass
- Current implementation uses displacement and velocity of hand
- Two hand poses in Unity: virtual hand and ghost hand
- Extract displacement between poses and velocity of hand

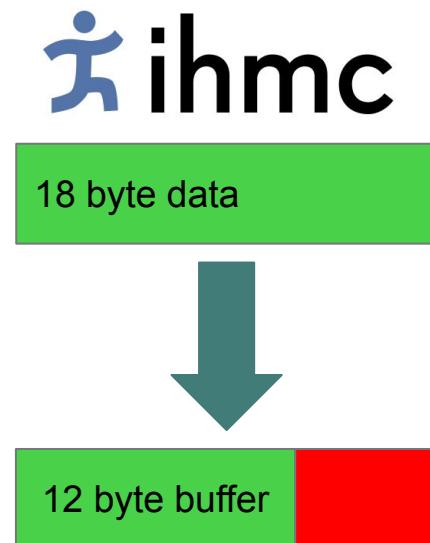

5. Challenges - Axis Alignment

- Unity world frame unaware of arm frame
- Transform displacement and velocity vectors from virtual environment to real world

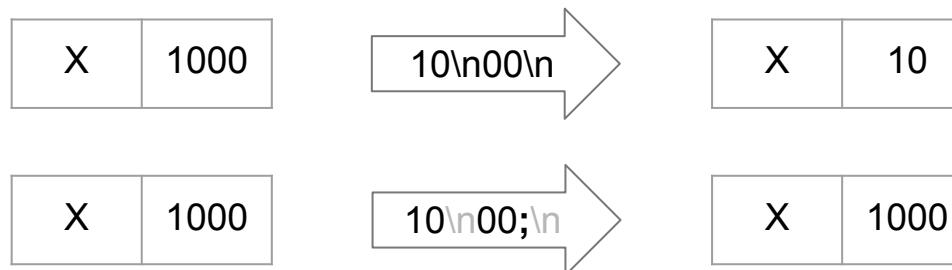

5. Challenges - IHMC to Frankalib Delay

- There was a delay between IHMC and the Panda arm
- Java socket library sent values as a string larger than buffer
- Resulted in a data backlog and a loss of transparency

5. Challenges - IHMC to Frankalib Integrity

- Newline characters signified end of data frame
- IHMC inserts random newline characters into data frame
- Use semicolon to signify end of data frame
- Newline characters ignored in data stream

A screenshot of a terminal window displaying four identical lines of text: 094, 26.812400817871094, 26.812400817871094, and 26.8124008178710. This visualizes how multiple data frames might be received as a single long string if newline characters are not properly handled.

Table of Contents

1. Introduction
2. Architecture Design
3. Hardware
4. Software
5. Challenges
6. End-to-end Communication Pipeline
7. Testing
8. Results & Analysis
9. Future Work

6. End-to-end Communication Pipeline

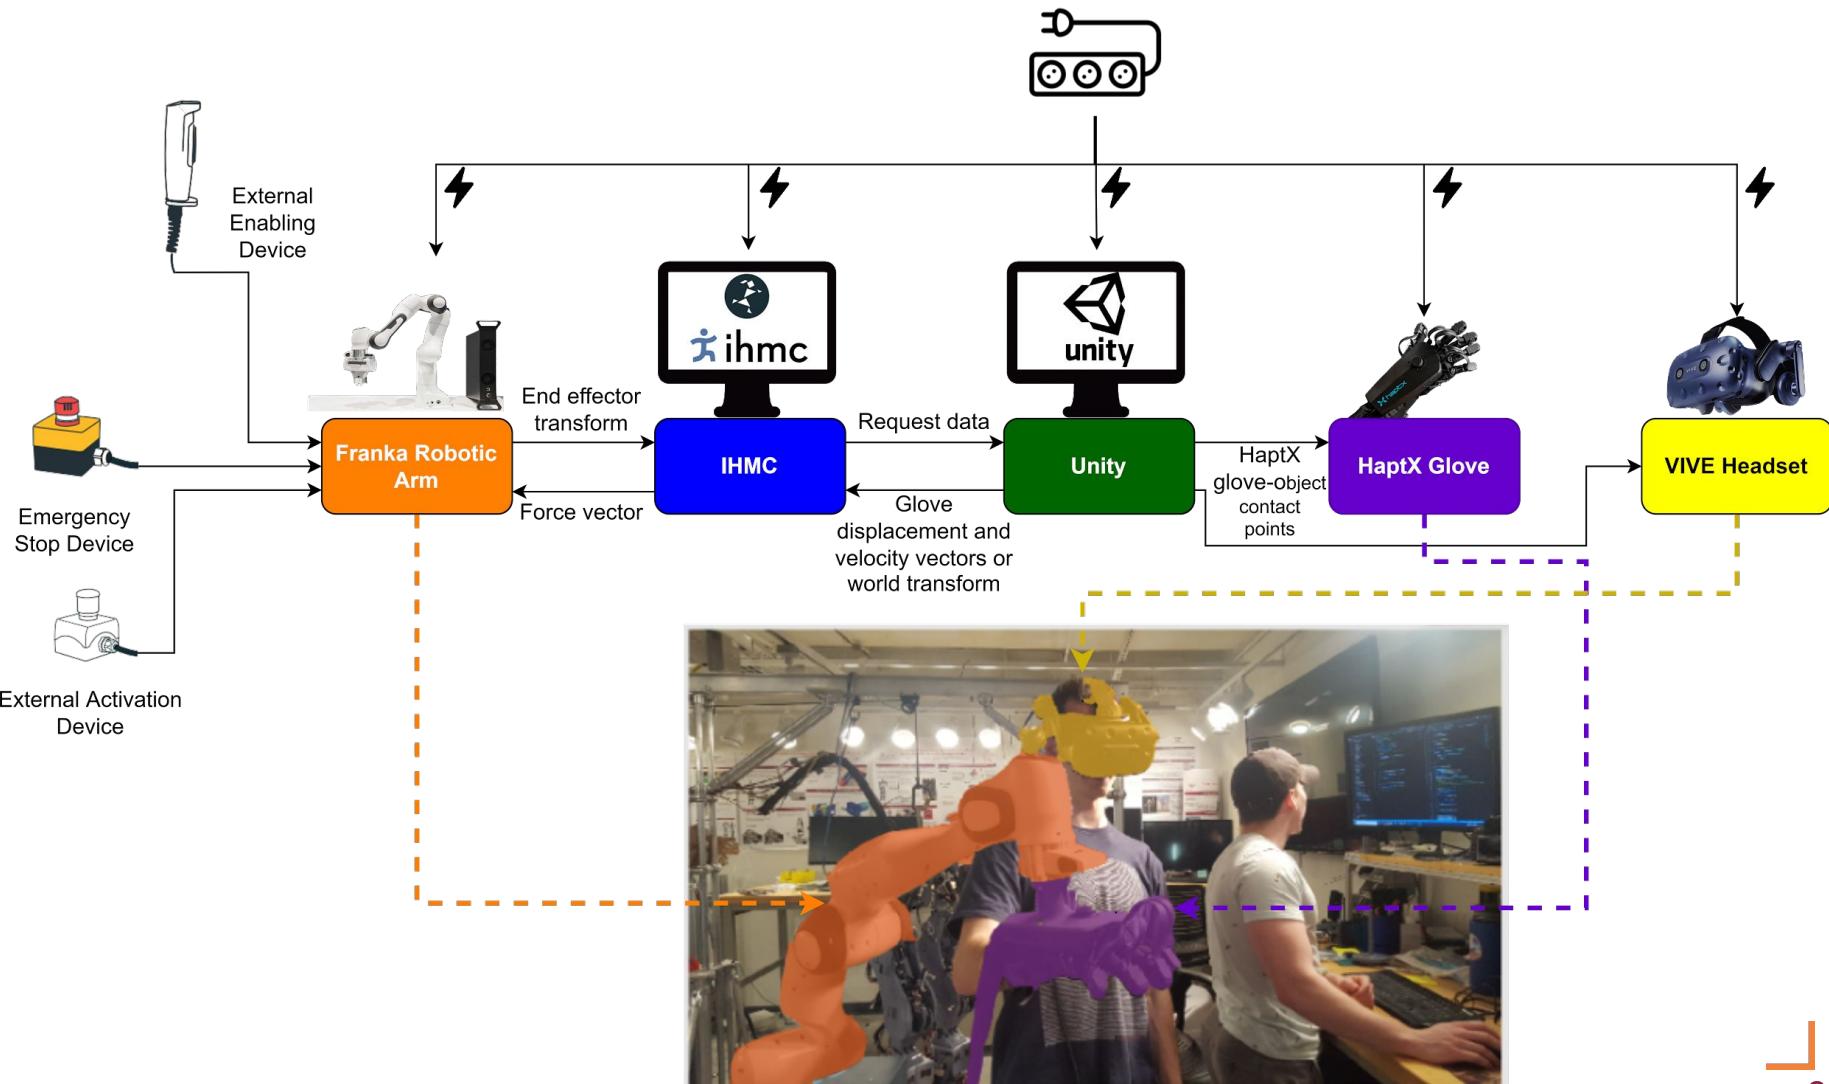

Table of Contents

1. Introduction
2. Architecture Design
3. Hardware
4. Software
5. Challenges
6. End-to-end Communication Pipeline
7. Testing
8. Results & Analysis
9. Future Work

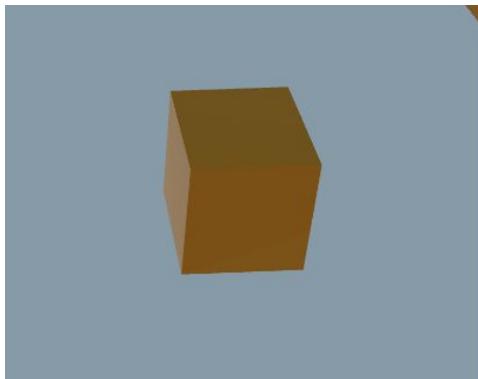

7. Testing

Objects:

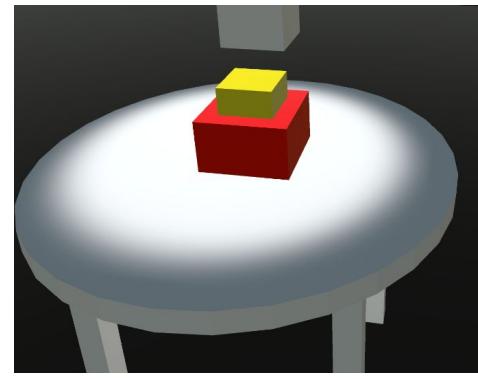

- Cube
- Table
- Tower of Hanoi

Implementations:

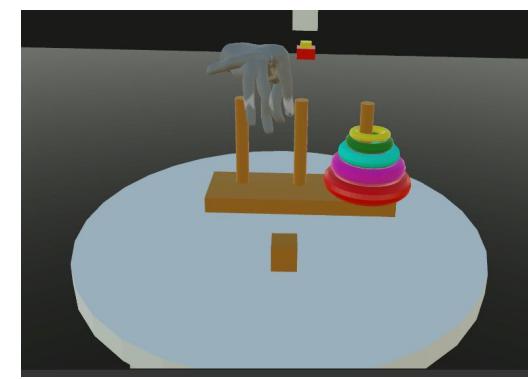

- Use object mass only
- Separate processes for static and dynamic objects
- Generalized forces using glove displacement

Cube

Table

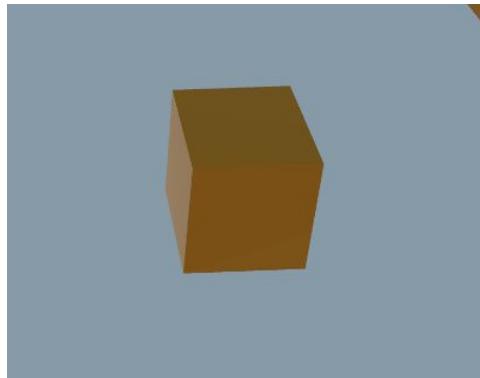

Tower of Hanoi

Table of Contents

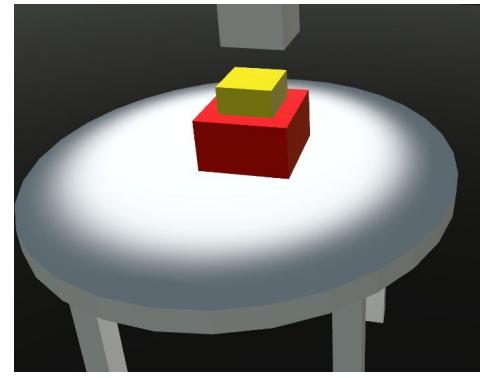

1. Introduction

7. **Testing**
8. **Results & Analysis**
9. **Future Work**

8. Future Work

- Integration with lower half of ForceBot

Acknowledgements

- Dr. Alexander Leonessa for the use of the TREC Lab and his dedication to the team's success
- Jesper Smith for his contribution of ROS Bridge functionality to IHMC Open Robotics Software
- Dr. Du and his students Qi Zhu and Tianyu Zhou for sharing research on Unity force extraction
- NSF grant #2024772: A Robotic Platform for Body-Scale Human Physical Interaction in Embodied Virtual Reality

Thank you!
